

Job Title: AI/ML Engineer

Job Description:

Design and develop artificial intelligence and machine learning models to solve business problems. Work with cross-functional teams to implement AI solutions.

Key Responsibilities:

- Build and train machine learning models.
- Analyze data to improve model performance.
- Deploy AI solutions in production environments.
- Collaborate with data scientists and engineers.

Required Skills & Experience:

- Bachelors in Computer Science or related field.
- Proficiency in Python, TensorFlow, or PyTorch.
- Experience with machine learning algorithms.
- Strong problem-solving skills.
