Job Title: Java Backend Engineer

Job Description:
Develop and maintain server-side applications using Java. Ensure high performance and scalability of backend systems.

Key Responsibilities:

- Write clean, efficient Java code.

- Design and implement APIs.

- Troubleshoot and debug backend issues.

- Collaborate with frontend developers.

Required Skills & Experience:

- Bachelors in Computer Science or equivalent.

- Strong knowledge of Java and Spring Framework.

- Experience with RESTful APIs.

- Familiarity with databases (e.g., MySQL).
